Expression Language (EL) in JSP

The Expression Language (EL) simplifies the accessibility of data stored in the Java Bean component, and other objects like request, session, application etc.

There are many implicit objects, operators and reserve words in EL.

It is the newly added feature in JSP technology version 2.0.

Syntax for Expression Language (EL)

\${ expression }

Implicit Objects in Expression Language (EL)

There are many implicit objects in the Expression Language. They are as follows:

Implicit Objects	Usage	
pageScope	it maps the given attribute name with the value set in the page scope	
requestScope	it maps the given attribute name with the value set in the request scope	
sessionScope	it maps the given attribute name with the value set in the session scope	
applicationScope	it maps the given attribute name with the value set in the application scope	
param	it maps the request parameter to the single value	
paramValues	it maps the request parameter to an array of values	
header	it maps the request header name to the single value	
headerValues	it maps the request header name to an array of values	
cookie	it maps the given cookie name to the cookie value	
initParam	it maps the initialization parameter	
pageContext	it provides access to many objects request, session etc.	

EL param example

In this example, we have created two files index.jsp and process.jsp. The index.jsp file gets input from the user and sends the request to the process.jsp which in turn prints the name of the user using EL.

index.jsp

```
<form action="process.jsp">
Enter Name:<input type="text" name="name" /><br/><input type="submit" value="go"/>
</form>
process.jsp
Welcome, ${ param.name }
```

EL sessionScope example

In this example, we printing the data stored in the session scope using EL. For this purpose, we have used sessionScope object.

```
index.jsp
```

```
<h3>welcome to index page</h3>
<%
session.setAttribute("user","sonoo");
%>
<a href="process.jsp">visit</a>
process.jsp
Value is ${ sessionScope.user }
```

EL cookie example

```
index.jsp
```

```
<h1>First JSP</h1>
</br>
<br/>
Cookie ck=new Cookie("name","abhishek");<br/>
response.addCookie(ck);<br/>
%>
<a href="process.jsp">click</a>
```

process.jsp

Hello, \${cookie.name.value}

Precedence of Operators in EL

There are many operators that have been provided in the Expression Language. Their precedence are as follows:

```
[] .

()

-(unary) not! empty

* / div % mod

+ - (binary)

< <= > >= It le gt ge

==!= eq ne

&& and

[] or

?:
```

Reserve words in EL

There are many reserve words in the Expression Language. They are as follows:

lt	le	gt	ge
eq	ne	true	false
and	or	not	instanceof
div	mod	empty	null
